

Task 1 — Web App QA & Debug Report

Application Tested: [TodoMVC React Demo](#)

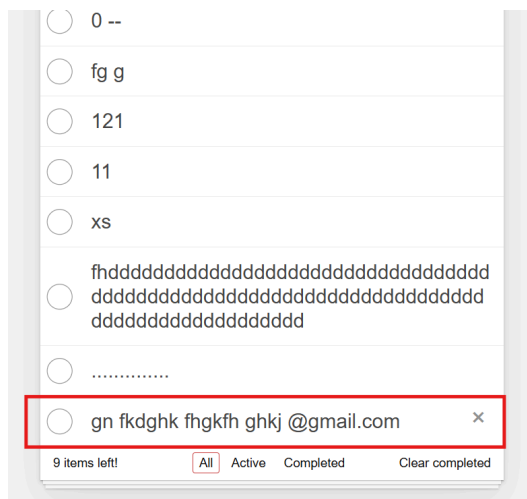

#	Title / Summary	Steps to Reproduce	Expected vs Actual	Severity	Suspected Cause
1	Todo deletes immediately without confirmation	Create a todo and click delete icon	Expected: Confirmation before deletion. Actual: Todo deletes instantly without warning	Medium	Missing confirmation dialog or undo mechanism
2	Delete icon overlaps with long todo text	Enter a very long continuous string as todo text	Expected: Text should wrap properly and delete icon should remain visible. Actual: Delete icon overlaps/hides inside text.	Medium	Missing text wrapping and responsive layout handling
3	Input field accepts unrestricted and malformed data	Enter random symbols, invalid text patterns, or extremely long numeric strings	Expected: Input should be validated or sanitized. Actual: All inputs are accepted without restriction.	Low	Missing frontend validation and sanitization
4	No validation feedback for short input	Enter a single-character todo and press Enter	Expected: User should receive validation feedback. Actual: Todo is not added and no message is displayed.	Low	Missing validation feedback handling
5	No undo/recovery option after deletion	Delete a todo accidentally	Expected: Undo or recovery option should be available. Actual: Todo is permanently deleted immediately.	Medium	Missing recovery/undo functionality

Screenshots

Long text → x button hidden

No proper input validation

Root Cause Analysis

The app does not handle very long text properly inside todo items. When I entered a long text with or without spaces, the delete (X) button got hidden inside the text and became hard to click. This happens because the text wrapping and layout handling are not properly implemented. Because of this issue, the UI looks broken and users may face difficulty while deleting tasks. To fix this issue, proper text wrapping and overflow handling should be added in the frontend design.
